

Assignment-1

Question 1

Create a Personal Web Profile Page Using HTML Only

Course

Web Application Frameworks

Assignment Title

Personal Web Profile Page Using HTML

Objective

Design and develop a simple personal web profile page using only HTML. This assignment focuses on understanding HTML document structure, semantic elements, hyperlinks, lists, tables, images, and forms without using CSS or JavaScript.

Learning Outcomes

After completing this assignment, students will be able to:

- Create a well-structured HTML5 document.
- Use semantic HTML elements appropriately.
- Organize information using headings, paragraphs, lists, and tables.
- Insert images and hyperlinks.
- Create a simple HTML form.
- Develop a complete static webpage using HTML only.

Instructions

- Use only HTML5.
- Do not use CSS, Bootstrap, or JavaScript.
- Create a single file named index.html.
- Use proper indentation and comments.
- All information should be your own.
- Ensure the webpage is readable using default browser formatting.

Webpage Sections

1. Header

Include:

- Your Name

- Student ID
- Course
- Department
- University

2. About Me

Write a short introduction (100–150 words) including:

- Educational background
- Career goal
- Personal interests
- Hobbies

3. Profile Photo

Insert your profile image using the tag.

4. Educational Qualifications

Create a table containing:

Qualification	Institution	Year	Percentage/CGPA
SSC			
Intermediate/Diploma			
B.Tech			

5. Technical Skills

Create an unordered list including skills such as:

- HTML
- CSS
- JavaScript
- Python
- Java
- SQL

6. Programming Languages

Create an ordered list showing programming languages known in order of proficiency.

7. Academic Subjects

Use a description list (<dl>) to describe at least four favorite subjects.

Example:

- Web Technologies
- Database Management Systems
- Data Structures
- Operating Systems

8. Projects

Display at least three academic projects using headings and paragraphs.

Each project should include:

- Project Title
- Description
- Technologies Used

9. Achievements

Create an unordered list of:

- Certifications
- Awards
- Workshops
- Internships

10. Hobbies

Display your hobbies using a nested list.

Example:

- Sports
 - Cricket
 - Football
- Reading
- Music

11. Useful Links

Add hyperlinks to:

- University Website

- GitHub Profile
- LinkedIn Profile
- Email (mailto)

12. Weekly Timetable

Create a timetable using an HTML table.

Include:

- Monday to Friday
- Time slots
- Subjects/Lab

13. Contact Form

Create a form containing:

- Full Name
- Email
- Phone Number
- Gender
- Department
- Date of Birth
- Message
- Submit Button
- Reset Button

14. Footer

Include:

- Copyright
- Student Name
- Academic Year

Question 2

Demonstrating the Model-View-Controller (MVC) Architecture Using HTML

Create a simple website that conceptually represents the Model-View-Controller (MVC) architecture using only HTML.

Requirements:

1. Create the following HTML pages:
 - index.html (Home Page)
 - model.html
 - view.html
 - controller.html
2. The Home page should contain:
 - A title: "MVC Architecture Demonstration"
 - A brief introduction to MVC
 - Navigation links to the three pages
3. The Model page should include:
 - Definition of the Model component
 - Responsibilities of the Model
 - At least five examples of data managed by the Model
4. The View page should include:
 - Definition of the View component
 - Responsibilities of the View
 - Examples of user interface elements
5. The Controller page should include:
 - Definition of the Controller component
 - Responsibilities of the Controller
 - A simple workflow illustrating how user requests are processed
6. Every page must contain:
 - Header
 - Navigation menu
 - Main content section
 - Footer
7. Use only HTML5. Do not use CSS, JavaScript, Bootstrap, or any server-side language
